

Overall Idea

Cecildunston.com is home to my portfolio site, with links to an about page and other info. The typical user would be a developer, entrepreneur, agency, or other team. I want to use principles brought up in my first draft (".column", "#header", "#menu", etc.) to translate the existing site (last updated 09/17, here)

Content

The content will include a link to an about page

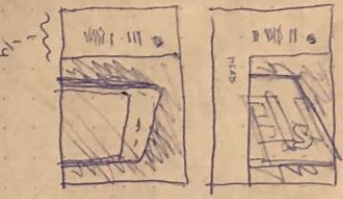

Index. list

→ this page should become "projects", "work", etc.

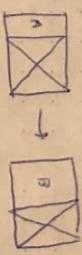

idea

- ~~new~~ New
- ↳ Permanent:
 - New
 - on wave. (projects (box) or equiv.
 - proj title ← also JS?
 - short desc ← wrap
 - "Foci" (discipline, type, etc.)
 - buttons
 - ↳ on click ("foci")
 - ↳ Filter by type
 - ↳ Order:
 - just that "Focus" (relevance)
 - date
 - arbitrary

idea

- no &, → buttons
- some sort of context
- Newspaper
- main frame
- about ← "on click"
- ↳ JS popup
- maybe place in body container?

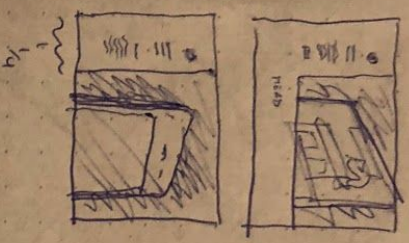

Index. list

→ this page should become "projects", "work", etc.

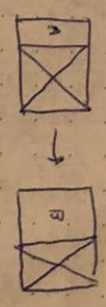

idea

- ~~left~~ New
- ↳ Permanent:
 - New
 - ↳ on hover: (Projects (box)) or equiv.
 - Proj. title ← also JS?
 - Short desc ←
 - "Focus" (discipline, type, etc.) ← wrap
 - ↳ buttons
 - ↳ on click ("focus")
 - Filter by type
 - ↳ order:
 - just find "Focus" (relevance)
 - date
 - advertising

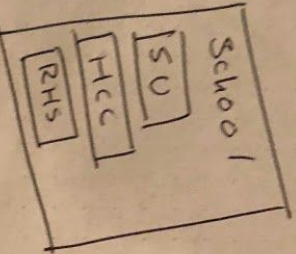

idea

- no ←, → buttons
- some sort of container
- Newspaper
- arrow/trace
- about ← "on click"
- ↳ JS popup
- maybe place in body container?
